

Arneg CO₂ Systems Offer Natural Refrigerant Solutions

INNOVATION IN NATURAL REFRIGERANTS

arneg

EUROPE

CO₂ is the best refrigerant to guarantee both energy savings and to ensure a reduction in the impact the retail industry has on the environment. Arneg Group aspires to a continually improving quality of life and, as a fundamental part of this, has developed CO₂ systems and applications such as:

- **BPC subcritical CO₂ cascade refrigeration system:** low temperature, for small and medium stores.
- **HCP transcritical CO₂ refrigeration unit:** medium and low temperature, for small stores. Compact unit available.
- **MPC subcritical CO₂ cascade**

refrigeration system: MT-LT integrated system, for medium stores. Smaller dimensions, lower costs: MT and LT in a single, compact system, costing less to run than two separate refrigeration units.

■ **Booster transcritical CO₂ refrigeration system:** MT-LT integrated system, for medium to large stores. Available for indoors or outdoors installations.

■ **HPM subcritical CO₂ high power multi-system:** low temperature, for medium to large stores. Highly efficient, with reduced volume, low noise, low cost and reduced expenses.
